

Billing Anomaly Detection: Turn Missed Billing into Realized Revenue

Detect, explain, and recover missed billing with AI-driven reconciliation

THE CHALLENGE

Finance and billing teams rely on static, rule-based reconciliation checks that fail to detect nuanced missed billing scenarios, resulting in recurring revenue leakage, delayed recovery, and high manual audit effort.

OUR SOLUTION

Cloud-native, AI-powered reconciliation built on Snowflake Cortex that intelligently analyzes billing data to proactively identify missed billing scenarios, starting with Recurring – No Usage products.

Revenue Protection Capabilities

- 1 AI-Assisted Reconciliation
- 2 Missed Billing Detection
- 3 Revenue Leakage Recovery
- 4 Finance & Audit Support
- 5 Rule Augmentation

What Sets It Apart

-  Leverages Cortex LLM with clear business justification
-  Combines billing data, rules, and historical patterns
-  Secure, scalable processing with no data movement
-  Traceable, reviewable outputs supporting audit confidence

Value Delivered

Finance Teams

Uncover hidden revenue leakage beyond traditional rules

CFO/Leadership

Improves revenue realization and strengthens confidence in financial controls

Billing Operations

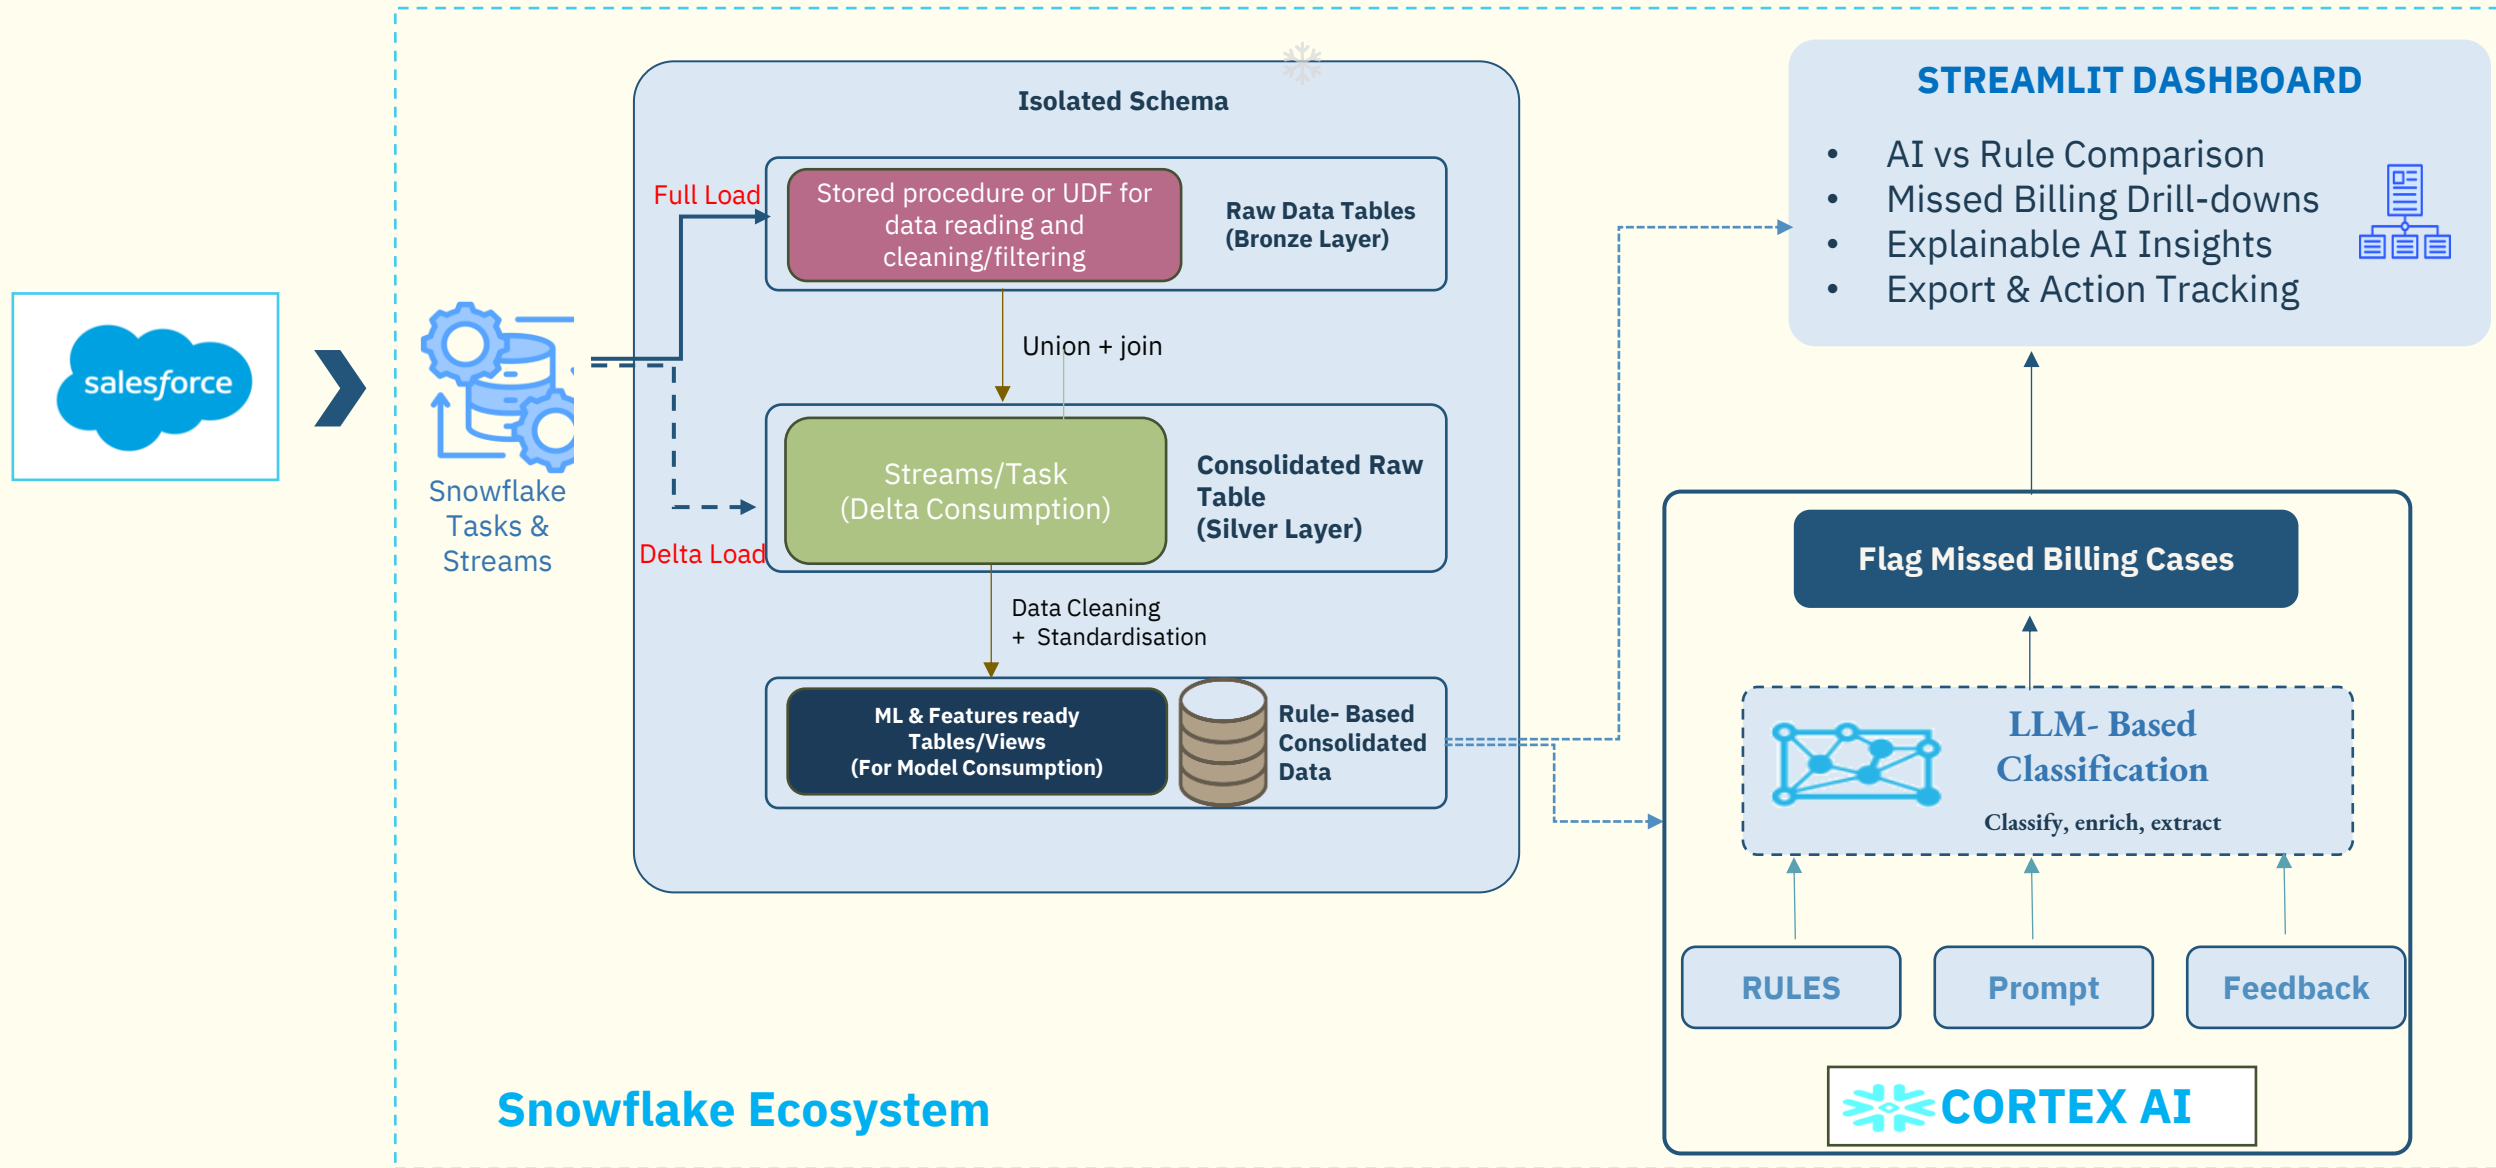

Reduce manual reconciliation and exception handling

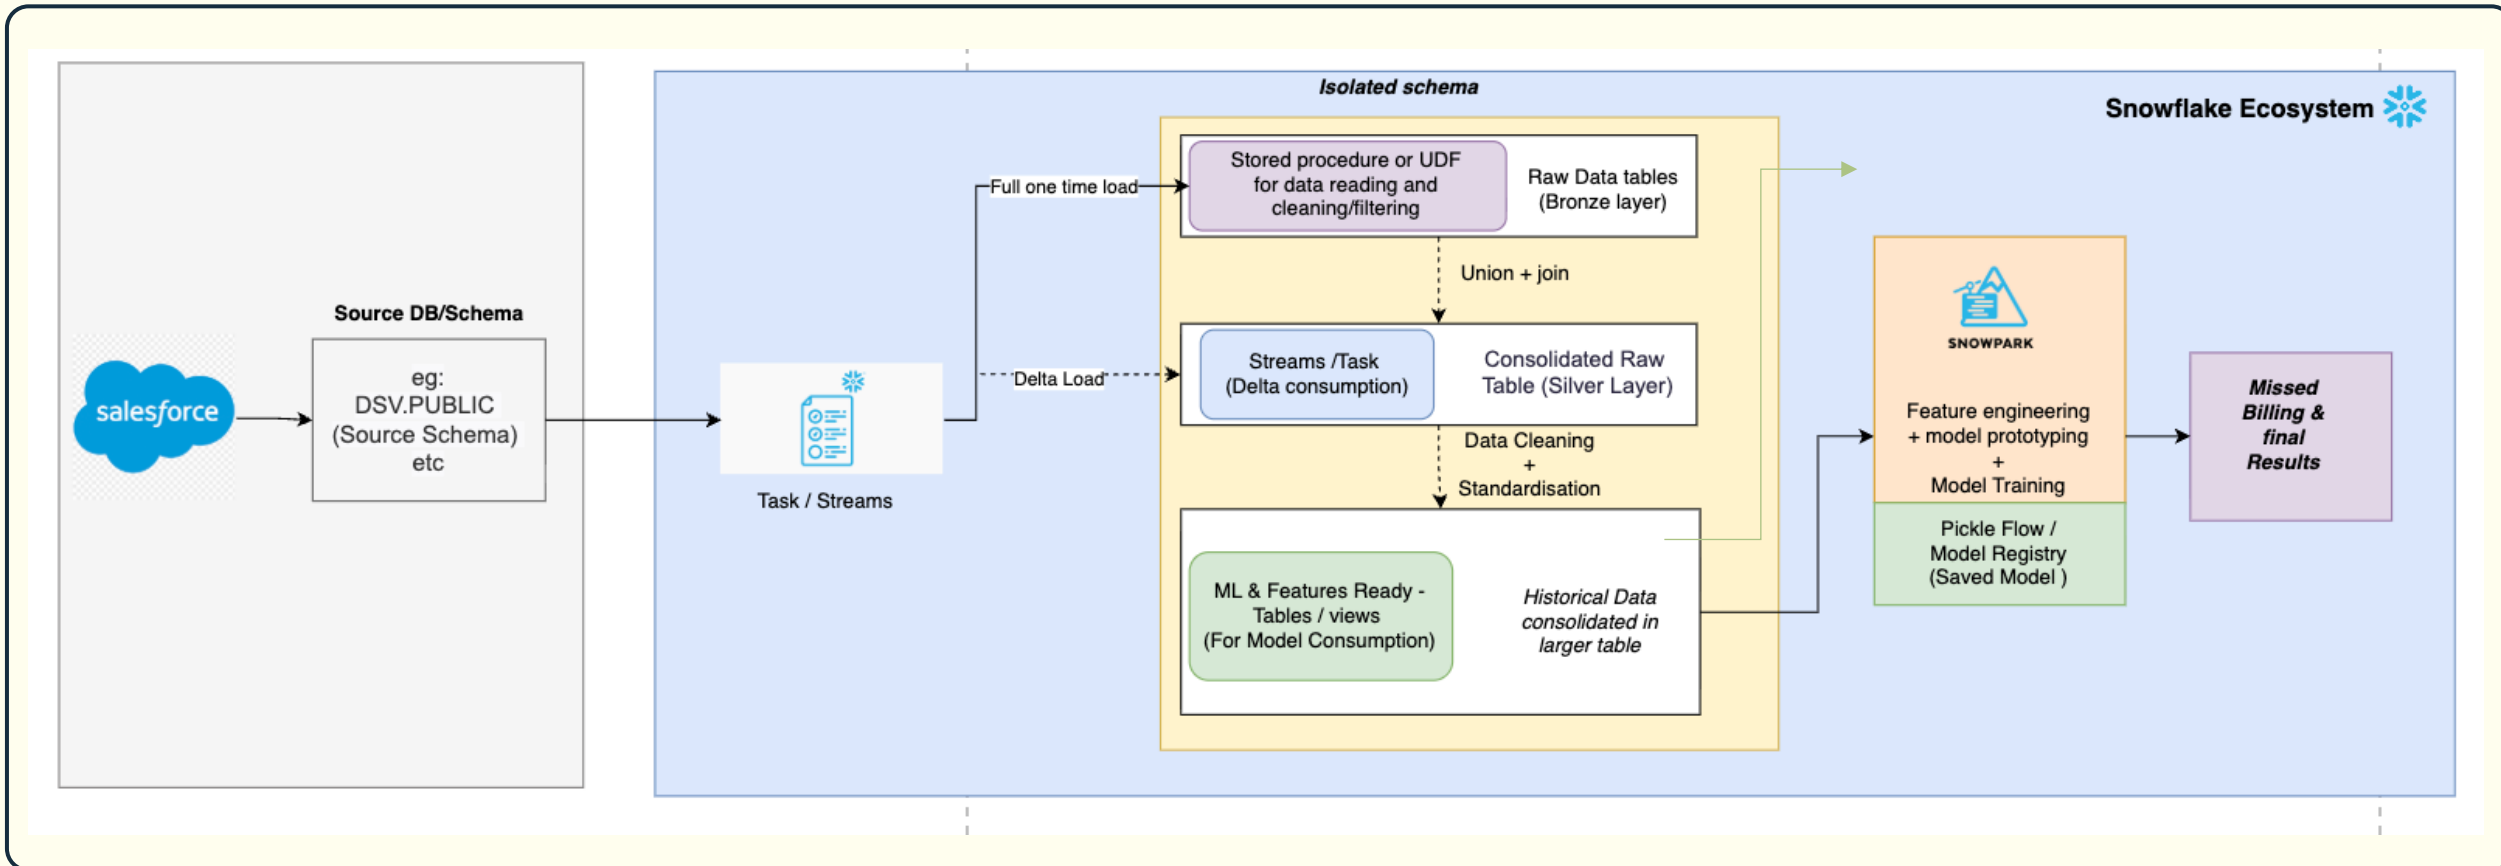

Revenue Officers

Maximizes billable revenue, minimizes leakage, and ensures end-to-end revenue integrity

Billing Anomaly Detection - How it Works (Architecture Behind the Scenes)
